

What's New in PRO Landscape Version 13

General

NEW! **New 3D in Both Image Editor and Planner** – Magically transforms your 2D Image Editor or CAD projects into a 3D image. You can then zoom in and out and rotate at any angle to really show your customer their landscape design from any perspective, even looking out the window of the house in Image Editor!

NEW! **Customizable Favorites** – You can now create unlimited favorites folders for quick, easy access to the objects you use most often. Create folders for you favorite plants, hardscapes, shade trees, accessories and more.

NEW! **Assemblies** – New support for creating and saving a group of objects into the database. You can create a plant grouping that you typically use and drag and drop it into Image Editor or Planner in one step. Or, create and assembly of all the things you need to plant a tree (stakes, straps, fertilizer, mulch, etc.) and add that to your bid by selecting one item.

NEW! **Price These Items** – Allows you to view and price the objects you have in your project so you can be sure you have set the prices before creating your proposal.

Image Editor

NEW! **Over 500 New Images** – PRO Landscape now has over 5500 of the industry's best images. Includes new plants set up by climate zones, as well as new statues and pavers.

NEW! **New Labeling Options** – Image Editor will now label all the plants with one click of the mouse. You can also include the plant size in your label.

NEW! **New Legend in Image Editor** – You can now add a legend to your Image Editor project.

NEW! **Improved Greenhouse Support** – Image Editor and Planner are now better integrated. You can now place a greenhouse from part of your Planner project into Image Editor and all the plant objects are placed automatically, saving you even more time.

NEW! **Full Screen Preview** – Now view your Image Editor project in full screen - perfect for presenting to your customer.

NEW! **Layers in Lighting** – You can now move your light objects in front or behind any object to create even more realistic lighting designs. For example, up- or down-lighting placed behind a tree.

NEW! **Enhanced Effects Dialog** – Change from one PRO Landscape effect to another with ease to find the best one for your project.

What's New in PRO Landscape Version 13

Planner

- NEW!** **New Content Librarian Symbol Commands** – Allows you to perform simple modifications to your symbols with ease. You can resize, rename, lighten or darken, change colors, delete or link symbols to the database in one easy step. You can also replace symbols on your drawing for a single occurrence, all occurrences, or multiple symbol replacement.
- NEW!** **Improved and Consolidated Inquire Menu** – You can now inquire multiple object types (grass, mulch, edging, pavers, retaining walls, irrigation, etc.) in a single place. Let's you select one or more objects and see detail or summary information.
- NEW!** **Symbol Array Improvements** – You can now create staggered rows using the symbol array command; new fill array to fill an irregular shaped area like a planting bed with an array of symbols; create an array along a freeform shape like a curved line.
- NEW!** **Improved Groundcover Trace** – You can now trace grass, mulch, and weed barriers around multiple areas. For example, tracing mulch around a foundation with multiple alcoves will trace the edging or retaining wall along with the foundation.
- NEW!** **Legend Improvements** – Legends now support multiple columns and the ability to include the object's price. Symbols can now be alphabetized or numbered. A copy button has been added to easily copy the legend data to the clipboard as either text or CSV so you can move it to other applications such as Excel.
- NEW!** **Annotation & Callout Improvements** – New annotation and callout options have been added to include the plant size. In addition you can annotate all plants with one command and annotate areas such as grass, mulch, edging, retaining walls, pavers, etc.
- NEW!** **Greenhouse Improvement** – Allows you to create a view for a section of your drawing and when you save the file just the objects in the view are written to the greenhouse. This allows you to place part of your CAD drawing in your Image Editor project.
- NEW!** **Soldier Course Improvements** – You can now put a soldier course edge on any paver area.
- NEW!** **Improved Project Timer** – The project timer is now a toolbar giving you much more flexibility in turning it on and off and allowing you to place it anywhere in Planner.

Proposal

- NEW!** **Performance Improvements** – Many performance improvements have been made to the Database & Price Editor allowing you to work faster.
- NEW!** **User Interface Improvements** – Many user interface improvements have been made to make Proposal even easier to use:
- Price editors (All Objects, By Category and By Project) improved to allow for resizable fonts and new controls.
 - The Proposal Number and Date have been added to the Open Quotes dialog which helps you find your project even faster.
 - The Title Page and Proposal Titles can be customized when you are using the Instant Customer Proposal.
 - A country field has been added
- NEW!** **Add Assemblies** – Assemblies can be added to a quote allowing you to add the price details necessary to install and complete your job.
