What's New in PRO Landscape Version 23
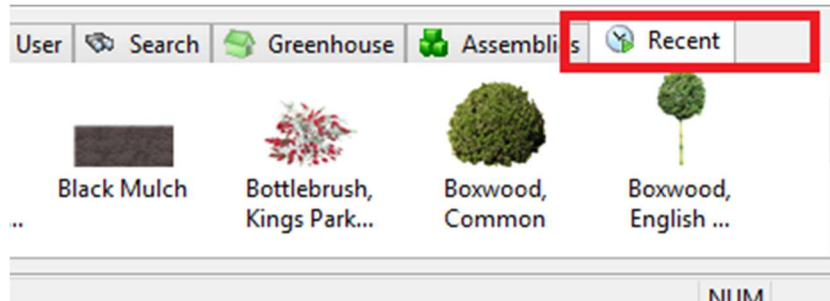

Recent Object Tab – PRO Landscape Image Editor has added a new selection to the Content Explorer. The new "Recent Tab" allows you to quickly view the last 50 items you have used in your project. This new tab makes it very easy to get back to plants and other objects that you've used on your most recent projects.

Over 3000+ New Images – The industry's largest library just got even larger! PRO Landscape now includes over **17,000** of the industry's highest quality images. The additional images include plants for all climate zones as well as new images for most non-plant categories (also includes images from our recent acquisition of EARTHSCAPES). These new plant images also include a corresponding, scaled CAD symbol that accurately represents each plant.
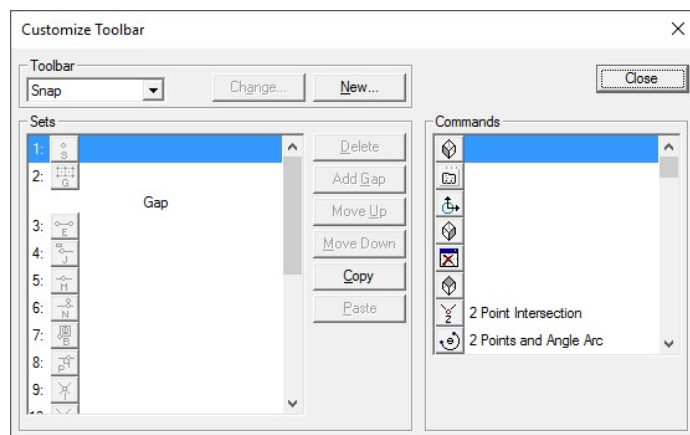

Windows 10 Anniversary Edition Support – PRO Landscape Version 23 has been updated to provide full support for both Windows 10 and the newer Windows 10 Anniversary Edition.

RealDWG 2017 – RealDWG support has been upgraded to include 2017 DWG and DXF CAD files, including AutoCAD® 2017.
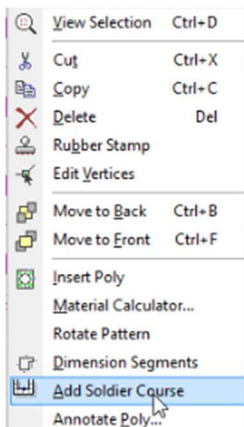

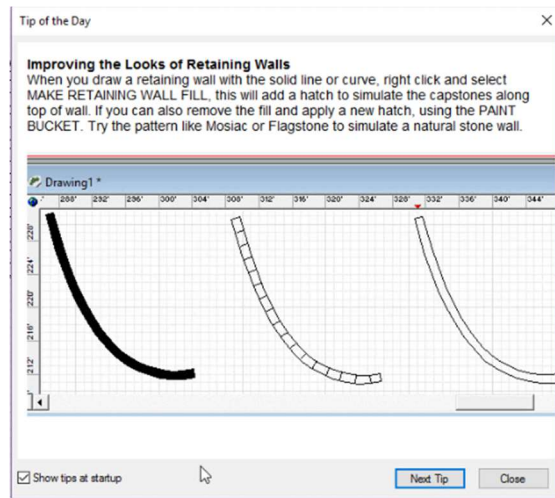

New Custom Toolbars – Version 23 has added a new Custom Toolbar feature for Planner. This allows the user to create your own custom tool bars and name them however you want. On your custom toolbar, you can include tools that originally reside on other toolbars and even create new tools from a list of program-wide commands.
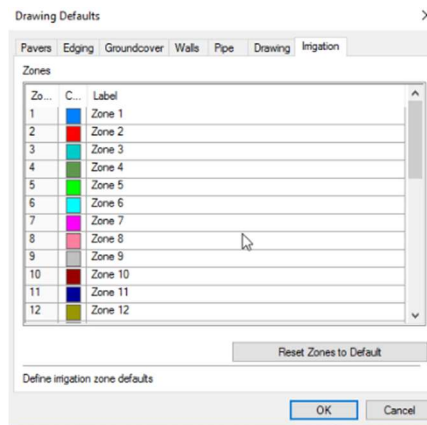

What's New in PRO Landscape Version 23

Tip of the Day – PRO Landscape Planner now includes a new convenience feature, the "Tip of the Day". Then, when you start Planner, the software will pop up a box containing the "Tip of the Day". These tips cover various features of the software and will provide you with little pieces of information that you may have not been aware of. For your convenience, these tips can easily be turned off and on.

Add Soldier Course – You can now create a paver, make any adjustments you want, then add the soldier course. Once your paver is complete you can right-click and select "add soldier course."

Irrigation Color Coding – This new feature adds a little something extra to your irrigation designs. You can now use a variety of colors to color code irrigation piping on a per zone basis. Identify your various pipes and zones much easier than ever before.

Legend Editor – When you create your legend, PRO Landscape now gives you the option to add blank rows to your legend that you can then fill with any kind of text that you would like.

Additional 4K Resolution Support – Version 23 includes pre-configured support for your 4K display (for devices such as Microsoft Surface Pro, Lenovo Yoga, etc.).

Improved PDF Import – This feature give you much better importing of PDF files; especially those with embedded images.

Easy Page Orientation – You can now change your page orientation (landscape or portrait) with a single click directly from the toolbar.
